TP5

ALUNO: SILVIO PINHEIRO

MATRÍCULA: 10191503789

E-MAIL: silvio.pinheiro@al.infnet.edu.br

TURMA: GRPRDC01C1-M2-P1

Sumário

1. Enunciado	3
2. Aplicação SUITECRM	3
3. Infraestrutura da aplicação	6
4. Provisionamento da aplicação	9
5. Publicação no GITHUB	12

1. Enunciado

Apresente um playbook Ansible que execute uma aplicação distribuída, **composta por dois ou mais containers Docker ou VMs em um host vSphere**. Seu playbook deve ser disponibilizado em um repositório GitHub, e seu trabalho deve incluir a URL para o repositório. Seu trabalho também deve apresentar o resultado da execução do playbook.

A entrega deve ser feita no Moodle em um documento pdf.

2. Aplicação sobre container

```
root@ansible:/home/suporte/TP3/TP5# docker volume create --name mariadb_data
mariadb_data

```

3. Aplicação SUITECRM

A aplicação selecionada foi o SuiteCRM que é um CRM opensource. Neste momento será implementando somente um webserver e um banco de dados, porém no decorrer do projeto será implementado um loadbalancer fazendo o balanceamento de carga para 3 webservers e 2 bancos de dados em alta disponibilidade.

4. Infraestrutura da aplicação

Para este TP foi selecionado a implementação da solução em um ambiente VMware vCenter com 3 hosts ESXI com balanceamento de carga e alta disponibilidade.

Foi utilizando um playbook para provisionar os servidores de banco de dados e webserver para o suitecrm.

```
root@ansible:~# cat deploy-vm.yml
---
- hosts: localhost
  gather_facts: no
  vars:
    vcenter_server: "10.0.10.100"
    vcenter_user: "administrator@vsphere.local"
    vcenter_pass: "VMware1!"
    datacenter_name: "VXLAB"
    cluster_name: "CL1"
  tasks:
    - name: Create suitecrm-db
      vmware_guest:
        hostname: "{{ vcenter_server }}"
        username: "{{ vcenter_user }}"
        password: "{{ vcenter_pass }}"
        validate_certs: False
        name: suitecrm-db
        template: ubuntu_tmp
        datacenter: "{{ datacenter_name }}"
        folder: /tp5
        cluster: "{{ cluster_name }}"
        datastore: "SYNO_02"
        networks:
          - name: DPG_MNGT_VLAN_10
            ip: 10.0.10.200
            netmask: 255.255.255.0
            gateway: 10.0.10.254
            type: static
            dns_servers: 10.0.10.1
        customization:
          hostname: "suitecrm-db"
          dns_servers:
            - 10.0.10.1
          state: poweredon
          wait_for_ip_address: yes
      delegate_to: localhost
```

```

- hosts: localhost

```

The screenshot displays the vSphere Client interface. On the left, a tree view shows the hierarchy: vcenter.vitab.local > VXLAB > Discovered virtual machine > tp5. The main panel shows the configuration for 'tp5' under the 'ACTIONS' tab. The 'Summary' sub-tab is active, showing 'Virtual Machines: 0'. Below this, there are sections for 'Custom Attributes' and 'Tags', both of which are currently empty. On the right side of the main panel, there are three status indicators: CPU USAGE (0 Hz), MEMORY USAGE (0 B), and STORAGE USAGE (0 B). At the bottom of the interface, a 'Recent Tasks' table is visible, listing several completed tasks related to the 'suitecrm-web' virtual machine.

Task Name	Target	Status	Details	Initiator	Quarant For	Start Time	Completion Time	Server
Delete virtual machine	suitecrm-web	Completed		VSPHERE.LOCAL\Administrator	3 ms	04/04/2020, 3:59:50 PM	04/04/2020, 3:59:50 PM	vcenter.vitab.local

A future Ansible release will default to using the discovered platform python for this host. See https://docs.ansible.com/ansible/2.9/reference_appendices/interpreter_discovery.html for more information. This feature will be removed in version 2.12. Deprecation warnings can be disabled by setting deprecation_warnings=False in ansible.cfg.
ok: [10.0.10.200]

TASK [basic : Update apt cache] *****
[WARNING]: Updating cache and auto-installing missing dependency: python-apt
ok: [10.0.10.200]

PLAY [suitecrm-db] *****

TASK [Gathering Facts] *****
[DEPRECATION WARNING]: Distribution Ubuntu 16.04 on host 10.0.10.200 should use /usr/bin/python3, but is using /usr/bin/python for backward compatibility with prior Ansible releases. A future Ansible release will default to using the discovered platform python for this host. See https://docs.ansible.com/ansible/2.9/reference_appendices/interpreter_discovery.html for more information. This feature will be removed in version 2.12. Deprecation warnings can be disabled by setting deprecation_warnings=False in ansible.cfg.
ok: [10.0.10.200]

TASK [basic : Update apt cache] *****
[WARNING]: Updating cache and auto-installing missing dependency: python-apt
ok: [10.0.10.200]

TASK [basic : Install required software] *****
[DEPRECATION WARNING]: Invoking "apt" only once while using a loop via squash actions is deprecated. Instead of using a loop to supply multiple items and specifying 'name: "{{ item }}"', please use 'name: ['python3', 'unzip']' and remove the loop. This feature will be removed in version 2.11. Deprecation warnings can be disabled by setting deprecation_warnings=False in ansible.cfg.
changed: [10.0.10.200] => (item=['python3', 'unzip'])

TASK [mysql : Update apt cache] *****
ok: [10.0.10.200]

TASK [mysql : Install required software] *****
[DEPRECATION WARNING]: Invoking "apt" only once while using a loop via squash actions is deprecated. Instead of using a loop to supply multiple items and specifying 'name: "{{ item }}"', please use 'name: ['mariadb-server', 'python3', 'python-mysqldb']' and remove the loop. This feature will be removed in version 2.11. Deprecation warnings can be disabled by setting deprecation_warnings=False in ansible.cfg.
changed: [10.0.10.200] => (item=['mariadb-server', 'python3', 'python-mysqldb'])
